

the world's number one food waste disposer

LC-50H

high-performance household food waste disposer

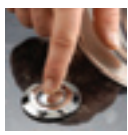

The LC-50H is an excellent multi-purpose disposer for household use.

The LC-50H is a tough, high performance, continuous feed disposer that eliminates the problem of food waste. Its unique, heavy duty induction motor allows long periods of continuous use without fear of overload or failure. Combined with a very generous food chamber it's the perfect answer for the high need household situation.

Its many features include stainless steel construction, and automatic reversing action for maximum performance and jam prevention.

The unique IN-SINK-ERATOR motor and overall construction mean that the LC-50H is remarkably quiet even under heavy load conditions.

The power, capacity and rigid construction are combined with ease of installation. It fits easily to the standard 90mm sink opening using the IN-SINK-ERATOR 'Quick-Lock' mounting assembly provided.

An air switch accessory is available for use with the LC-50H, can be installed on the worktop or sink and is supplied with interchangeable chrome and white finishes (cut out size 33mm diameter).

Technical specification*	LC-50H
0.5 horsepower, high torque induction motor	●
